In the Arctic region, for example, the Arctic ozone layer has decreased to as little as 7% of its original size, a situation that had dire consequences for the ecosystem, as the ice shelves disappeared. The Inuit – whose culture includes hunting, fishing and gathering for food – were among the first to suffer. Other affected communities include the Yup'ik and Inuit of Alaska and the Inuit of northern Canada. Some of the effects on the latter include: Severe respiratory infections and pulmonary diseases are far more common. Cancer rates are 2 to 3 times higher than in Canada. Asthma among the Yup'ik and Inuit is 30 times higher than in the rest of the country. There are more respiratory-related deaths in the Yukon-Kuskokwim delta than in the rest of Alaska. Cancer rates in some Alaska communities are five times higher than the rest of the country. Among the Inuit of northern Canada, the cancer rate is 200 times higher than in the rest of Canada. Other communities that have seen respiratory diseases spread quickly include the Sealaska people of the Aleutian Islands, with severe respiratory diseases killing an estimated 40% of their children under 5. In the Far North, infectious diseases, such as 82157476af
